1	GMR in metallic multilayers - a simple picture	7
1.1	Introduction	7
1.1.1	Nobel prize	7
1.1.2	Magnetoresistance	8
1.1.3	Magnetic Recording	10
1.1.4	Perpendicular recording and future storage technology	13
1.2	GMR: A Historical Perspective	16
1.3	Qualitative arguments	18
1.3.1	Quantum Well (QW) Approach	19
1.3.2	Spin-Polarized Quantum Well States	19
1.4	Interlayer Exchange Coupling	23
1.5	3-dimensional model: Fermi surface nesting	25
1.6	Strength of coupling: theory vs experiment	25
1.6.1	Growth related issues and measuring interlayer coupling	25
1.6.2	GMR in magnetic sensors	28
1.6.3	Biquadratic coupling	29
1.7	Selected multilayer systems	29
1.7.1	Co/Cu(001)	31
1.7.2	Multilayers grown on Fe whiskers	31
1.7.3	Fe/Cr system	31
1.7.4	Multilayered alloys and nanowires	33
1.8	Scattering of electrons: a simple picture	34
1.9	Magnetic Tunnel Junctions	39
1.10	Half-metallic systems	39
1.11	Summary	40
1.11.1	Acknowledgments	40
2	Overview of first principles theory: metallic films	45
2.1	First principles band structure	46
2.1.1	Linearization in energy	47
2.1.2	Basis sets for thin metallic films	48

2.1.3	Full Potential	51
2.1.4	Some aspects of group theory	54
2.1.5	Simple examples	55
2.1.6	Spectral Representation	55
2.2	Density Functional Theory: Reduction of the many-electron problem	58
2.3	Itinerant magnetism	59
2.4	Localized vs itinerant magnetic moments	60
2.5	Stoner criteria	61
2.6	RKKY Theory and Interlayer Coupling	62
2.7	Local spin-density functionals	67
2.8	Helical magnetic configurations: non-collinear magnetism	69
2.9	Orbital and Multiplet effects	70
2.10	Current Density Functional Theory	73
2.10.1	Current density in exchange-correlation of atomic states	73
3	Thin epitaxial films: insights from theory and experiment	79
3.1	Metastability and pseudomorphic growth	79
3.2	A brief introduction to kinetics	80
3.3	Strain in hetero-epitaxial growth	81
3.4	Alloy phase diagrams and defects	85
3.5	Metastability and Bain distortions	86
3.6	Interfaces in metallic multilayers - Pb-Nb and Ag-Nb	91
3.7	Magnetic 3d metals	96
3.8	Epitaxially grown magnetic systems	98
3.9	More on epitaxially grown fcc Fe/Cu	99
3.10	Epitaxially grown Fe ₁₆ N ₂ films	102
3.10.1	Experimental background: Fe nitrides	103
3.10.2	Discussion of large Fe moments	104
3.11	More on Fe/Cr	106
3.12	bcc Nickel grown on Fe and GaAs	106
3.13	Summary	107
4	Magnetic anisotropy in transition metal systems	113
4.1	Basics of magnetic anisotropy	113
4.1.1	Magnetocrystalline anisotropy (MCA)	114
4.1.2	Early work	115
4.1.3	Dipole-dipole interaction and related anisotropy	117
4.1.4	Magnetoelastic anisotropy	119
4.1.5	Perpendicular Magnetic Anisotropy	119
4.1.6	XMCD and XMLD for anisotropy measurements	121
4.1.7	Mermin-Wagner theorem	122

4.1.8	Spin Hamiltonian	123
4.1.9	Band theoretical treatments	124
4.1.10	Spin reorientation transitions in multilayers	125
4.2	Exchange-bias due to exchange anisotropy	129
4.2.1	Exchange anisotropy with insulating AFM films	131
4.2.2	Exchange anisotropy with metallic AFM films	134
4.2.3	Applications: Exchange-biasing in spin-valves/sensors	136
5	Probing layered systems: a brief guide to experimental techniques	141
5.1	SMOKE (Surface Magneto-Optic Kerr Effect)	141
5.2	AES (Auger Electron Spectroscopy)	145
5.3	FMR (Ferromagnetic Resonance)	146
5.4	STM (Scanning Tunneling Microscopy)	147
5.5	AFM (Atomic Force Microscopy)	148
5.6	Neutron Diffraction	148
5.7	Mössbauer Spectroscopy	150
5.8	LEED (Low Energy Electron Diffraction)	152
5.9	RHEED (Reflection High Energy Electron Diffraction)	153
5.10	ARPES (Angle Resolved Photo-Emission Spectroscopy)	155
5.11	XAS (X-ray absorption spectroscopy)	160
5.12	Magnetic Dichroism in XAS	160
5.13	X-PEEM (X-ray Photoelectron Emission Microscopy)	161
5.14	SPLEEM (Spin Polarized Low Energy Electron Microscopy)	161
5.15	Andreev Reflection	164
6	Generalized Kohn-Sham Density Functional Theory via Effective Action Formalism	169
6.1	Introduction	169
6.2	Effective action functional	171
6.3	Generalized Kohn-Sham theory via the inversion method	173
6.4	Kohn-Sham density-functional theory	177
6.4.1	Derivation of Kohn-Sham decomposition	177
6.4.2	Construction of the exchange-correlation functional	179
6.4.3	Kohn-Sham self-consistent procedure	182
6.5	Time-dependent probe	184
6.6	One-electron propagators	185
6.7	Excitation energies	187
6.8	Theorems involving functionals $W [J]$ and $\Gamma [Q]$	190
6.8.1	Time-independent probe	190
6.8.2	Time-dependent probe	192
6.9	Concluding Remarks	194

6.9.1	Acknowledgments	194
7	Magnetic Tunnel Junctions and Spin Torques	197
7.1	Magnetic Random Access Memory (MRAM)	197
7.2	Magnetic Tunnel Junctions	198
7.3	Theoretical aspects of TMR	202
7.4	Devices with large TMR values	205
7.5	Double barriers, vortex domain structures	205
7.6	Spin Transfer Torques in Metallic Multilayers	210
7.7	Ultra-fast reversal of magnetization	215
7.8	Transistors based on spin orientation	217
7.9	Summary	217
8	Confined electronic states in metallic multilayers	221
8.1	Wedge shaped samples	222
8.2	Phase accumulation model	224
8.3	Interfacial roughness	226
8.4	Envelope functions of the QW state	227
8.5	Multiple Quantum Wells	229
8.6	Non-free-electron-like behavior	231
8.7	Reduction of the 3-dimensional Schrödinger equation	231
8.8	Envelope Functions and the Full Problem	233
8.9	Applications - Confined States in Metallic Multilayers	235
8.9.1	Spin Transmission and Rotations	237
8.9.2	Angle Resolved Photoemission and Inverse Photoemission	238
8.10	Summary	239
8.10.1	Acknowledgments	239
9	Half-metallic systems: complete asymmetry in spin transport	243
9.1	Introduction	243
9.1.1	Covalent gaps	245
9.1.2	Charge-transfer gaps	246
9.1.3	d-d band gap materials	246
9.2	Half Heusler alloys: NiMnSb and PtMnSb	246
9.3	Full Heusler alloys: Co_2MnSi , Co_2MnGe , $\text{Co}_2\text{Cr}_{1-x}\text{Fe}_x\text{Al}$	248
9.4	Chromium Dioxide	249
9.5	Perovskites and double-perovskites	251
9.6	Multilayers of zincblende half-metals with semiconductors	251

10 Exact theoretical studies of small Hubbard clusters	255
10.1 Introduction	255
10.2 Methodology and Key Results	257
10.3 Charge and Spin Pairings	259
10.4 T-U phase diagram and pressure effects	260
10.5 Unpaired, dormant magnetic state	262
10.6 Linked 4-site clusters	263
10.7 Summary	264
10.7.1 Acknowledgments	264
