

# Caching your GitHub password in Git

MAC | WINDOWS | LINUX | ALL

If you're cloning GitHub repositories using HTTPS, you can use a *credential helper* to tell Git to remember your GitHub username and password every time it talks to GitHub.

**Tip:** You need Git **1.7.10** or newer to use the credential helper.

Turn on the credential helper so that Git will save your password in memory for some time. By default, Git will cache your password for 15 minutes.

**1** In Terminal, enter the following:

```
$ git config --global credential.helper cache
# Set git to use the credential memory cache
```

**2** To change the default password cache timeout, enter the following:

```
$ git config --global credential.helper 'cache --timeout=3600'
# Set the cache to timeout after 1 hour (setting is in seconds)
```
