

SYLLABUS

COMPUTATIONAL PHYSICS

FALL SEMESTER 2024

https://www.phys.uconn.edu/~rozman/Courses/P2200_24F/

Last modified: August 30, 2024

Course description: The goal of this course is to give an introduction to using computers for solving hard problems that arise in the physical sciences. The approach requires a combination of “real” mathematics, skills in making legitimate approximations, and intelligent use of computers.

To achieve the goals, Physics 2200 *Computational Physics* provides an introduction to the following topics:

- numerical methods for the physical sciences
- programming and programming languages
- analysis of algorithms
- operating systems and programming tools

Course website: https://www.phys.uconn.edu/~rozman/Courses/P2200_24F/

Lectures: MoWe 5:00PM – 6:15PM, in GS-119

Computers and programming:

- a laptop is required for every class meeting
- individual Linux virtual machines are provided for class work to all enrolled students.

Instructor: Michael Rozman

email: michael.rozman@uconn.edu

office hours: Mo 6:15 PM – 7:15 PM in GS-119,
We 6:15 PM – 7:15 PM in GS-119, and by appointment

Textbook: No required textbook. Handouts for the lectures will be provided.

Exams: Three midterm exams, no final. Parts of the exams may be substituted by take-home projects.

Grading scheme: The course grade will be calculated using the following scheme.

Homework assignments	40%
3 Midterms	60%

Course grade = $0.4 \cdot \text{HW} + 0.2 \cdot (\text{M1} + \text{M2} + \text{M3})$, correctly rounded to integers and capped at 100%.

The rounding to integers is done using the default rounding mode specified in the IEEE754 standard for floating point arithmetic.

The percent grades are converted to the letter grades as following.

Percent grade	Letter grade
94+	A
90-93	A-
87-89	B+
83-86	B
80-82	B-
77-79	C+
73-76	C
70-72	C-

Mid-semester progress: the percent grade is calculated using the rule $0.5 \cdot \text{HW} + 0.5 \cdot \text{M1}$, correctly rounded to integers and capped at 100%.

Class schedule:

Week(s)	Subject
1-4	Programming in Julia. Version control systems, git, GitHub and Git-Lab. Linux. Image processing. Numerical methods. Automatic differentiation.
5	Midterm I - Wed, Sep 25
5-8	Numerical methods: ODE; molecular dynamics; white dwarfs
9-10	Monte Carlo methods; phase transitions
10	Midterm II - Mon, Oct 28
11-14	Numerical methods: PDE
13	Thanksgiving recess
15	Distributed computing. Neural networks and machine learning
15	Midterm III - Mon, Dec 2

For an up-to-date schedule consult the *Academic Calendar* at https://www.phys.uconn.edu/~rozman/Courses/P2200_24F/downloads/calendar.pdf

Honors conversion:

Students interested in honors conversion should contact the instructor during the *second* week of classes.

Homework: Homework assignments typically consist of several components including on-line and on-paper parts. The date of the submission as the date when last component is submitted to the instructor.

Homework assignments submitted on time may be returned (at the discretion of the instructor) for corrections with a followup re-grading.

Homework assignments are not accepted after the solutions had been discussed in class, and/or had been posted online, and/or graded assignments returned. Individual emergencies can be accommodated by extra credit assignments.

You are welcome to discuss the homework's problems with others in order to better understand them but the work you turn in must be your own. In particular, you

must run your own calculations (where applicable) and communicate and explain the results in your own words.

Members of collaborating groups must consistently list all collaborators names.

Requirements for written on-paper assignments:

- Use letter-size paper.
- Box your final answer(s) and important intermediate results.
- Use only one side of each sheet, **staple** your notes together with the assignment cover page.

Assignments that are hard to understand are also hard to grade correctly, therefore: (a) use words and pictures to supplement your equations; (b) work must progress linearly down the page – recopy solutions that are too nonlinear.

Communications: talking in person (including videoconferencing) is the preferred method to communicate with the instructor; email is an option to schedule an appointment or to ask/answer a short question.

- use your UConn email for class communications.
- please include the tag ``[phys2200]`` (without quotes) in the subject of your email, e.g. “[phys2200] midterm II review session”.
- the subject line of your email should communicate exactly what the email is about so that the recipient can prioritize the email’s importance without opening it. E.g. “[phys2200] Tacoma bridge collapsed - cannot come to the exam” would be a good email subject (assuming email existed in 1940 ...); “urgent”, “important”, “a question” are bad ones. Do not use your name as subject – the sender name is already visible as a part of email header.
- do not send emails with attachments or embedded graphics unless requested by the instructor.
- do not include commercial advertising into your emails

Student responsibilities and academic policies: Students at the University of Connecticut are held to certain standards and academic policies. Review these important standards and policies — [the links are provided on the Office of the Provost website](#).
