# RENAMIMG A GITLAB REPOSITORY/PROJECT

http://www.phys.uconn.edu/~rozman/Courses/m3510_17f/

Last modified: September 14, 2017

To rename a project/repository, navigate to your project and click on the *Settings* tab on the top right side of your screen:

On the next screen select *Advanced settings* at the bottom.

| Project | Repository | Issues 0 | Merge Requests 0 | Pipelines | Wiki | Snippets | Members | **Settings** |

General Integrations Repository Pipelines

General project settings   Expand
Update your project name, description, avatar, and other general settings.

Sharing and permissions   Expand
Enable or disable certain project features and choose access levels.

Merge request settings   Expand
Customize your merge request restrictions.

Export project   Expand
Export this project with all its related data in order to move your project to a new GitLab instance. Once the export is finished, you can
import the file from the "New Project" page.

Advanced settings   Expand
Perform advanced options such as housekeeping, exporting, archiving, renaming, transferring, or removing your project.

On the next screen, navigate toward the bottom of the page and update the information in the *Rename repository* section.

Advanced settings

Perform advanced options such as housekeeping, exporting, archiving, renaming, transferring, or removing your project.

[Collapse]

Housekeeping

Runs a number of housekeeping tasks within the current repository, such as compressing file revisions and removing unreachable objects.

[Run housekeeping]

Archive project

Archiving the project will mark its repository as read-only. It is hidden from the dashboard and doesn't show up in searches. **Archived projects cannot be committed to!**

[Archive project]

Rename repository

Project name

hw02

Path

https://░░░░░conn.edu/░░░░░/   hw02

- Be careful. Renaming a project's repository can have unintended side effects.
- You will need to update your local repositories to point to the new location.
